

Cloud Access Security and Compliance Made Simple

Today your mission-critical data is spread across dozens of SaaS services, cloud platforms, and home-grown applications and shared through countless API-based integrations.

These technologies have changed how the world works. But, they've made it very difficult to quickly track user permissions, cloud infrastructure entitlements, devops compliance, and other service-specific security configuration settings. As your organization grows so does the complexity of access security and compliance. You have more people everywhere to track, more applications and tools, and an increase in security risk.

Zilla delivers a purpose-built solution for a cloud-first world. Zilla connects to deployed cloud services and on-premises applications to continuously monitor identities, accounts, permissions and security settings. We automate access reviews and simplify your compliance processes to save you time and money. And, at the same time, improve your security posture.

Save Time & Reduce the Annual Cost of Access Compliance

TYPICAL RESULTS

\$174,000

Total Savings

\$60,000+

IT Compliance Manager

\$60,000+

Reviewers

\$42,000+

Application Administrators

\$12,000+

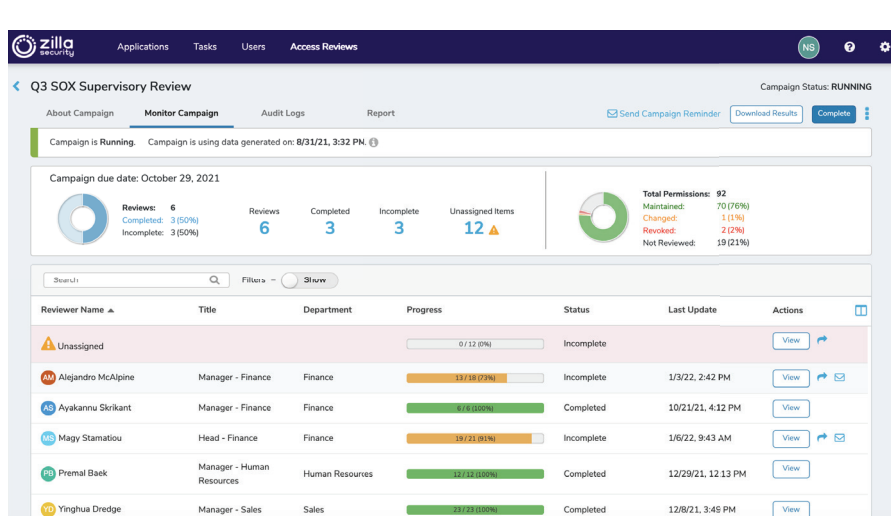

Auditors

Zilla Security makes it easy to reduce the routine manual tasks required to perform access reviews and audits. We automate your access compliance processes without the need for expensive professional services engagements.

HERE'S HOW

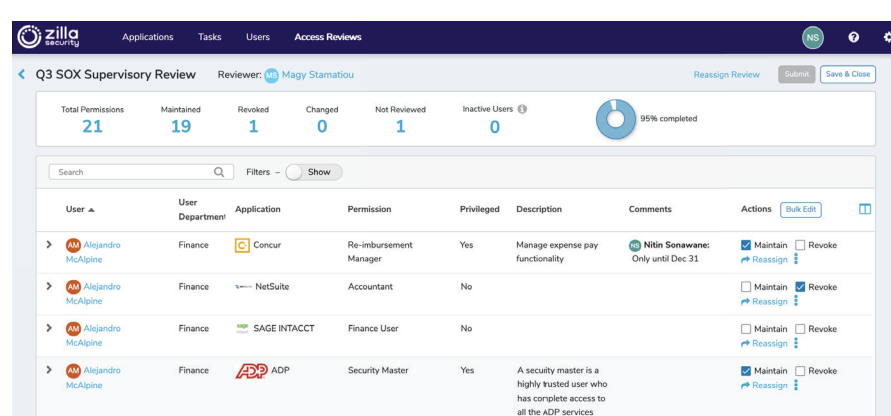

IT Security & Compliance Managers

Save time collecting permission data, assigning review tasks, monitoring reviewers, tracking remediation and supporting audits

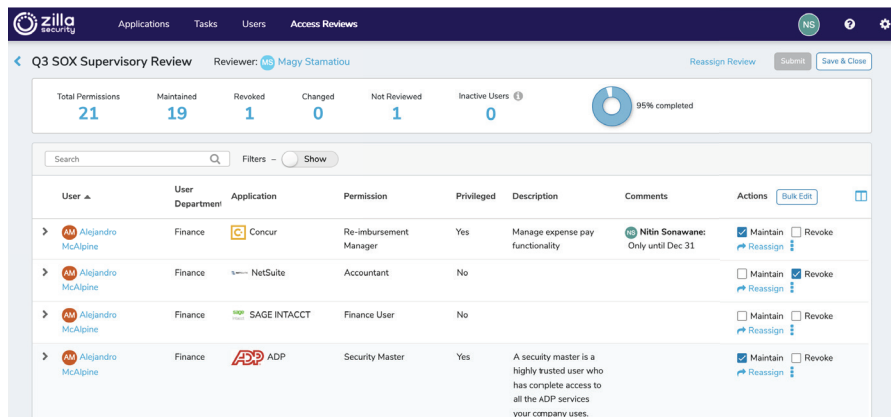

Reviewers

Supervisors and application owners can save time evaluating and completing access reviews

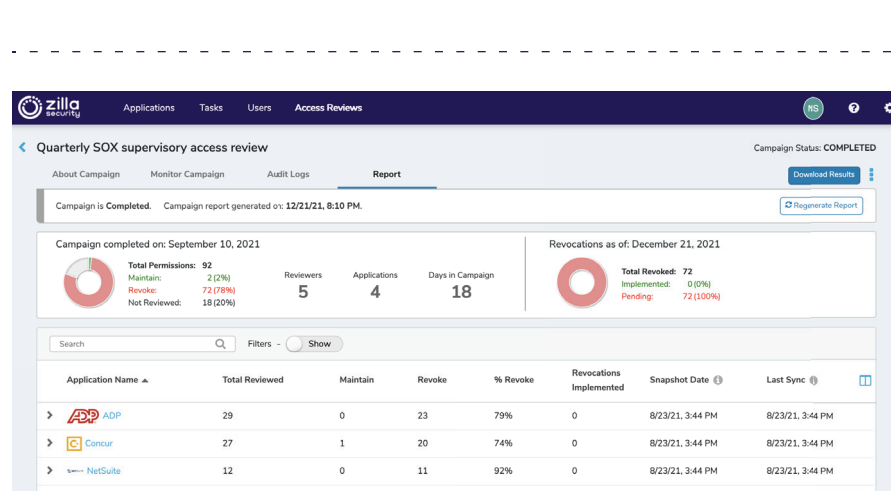

Application Administrators

Save time compiling reports, providing permission data for reviews, tracking access, and correcting user permissions

Auditors

Save time assessing and reviewing audit processes and access controls

ENSURE HIGH QUALITY COMPLIANCE

Zilla Security ensures consistency across your organization and improves the quality of compliance. We decrease the potential for human error and:

- Increase data protection through better accuracy
- Minimize audit findings and the potential for fines
- Deliver consistency in processes and review procedures

IMPROVE OPERATIONAL EFFICIENCY

20% Reduction in Support Ticket Requests

We help you do more with less by giving you centralized visibility of your compliance and security posture. Zilla lets you see who has access and what rights have been granted across all applications and services. We enable you to:

- Minimize Help Desk support related to access requests and changes
- Reduce access changes performed by Application Administrators
- Scale processes easily with "out-of-the-box" integrations to your centralized directory
- Improve access management for remote workers

INCREASE OVERALL SECURITY

Priceless Eliminating the Cost of a Security Breach

Zilla Security ensures that you get your permissions and access privileges through a centralized, shared access security and compliance service that improves security. We give you an automated solution that monitors, reviews, and remediates access to:

- Eliminate excessive entitlements by revoking inappropriate privileges
- Expand access review coverage across more applications and users
- Identify and remove orphan accounts that are no longer active.
- Revoke duplicate accounts
- Detect external identities by application, and review internal versus external access privileges
- Identify all service accounts including API accounts

About Zilla Security

Zilla's SaaS platform for security and access compliance automates the processes that are essential for maintaining compliance with regulations like SOX, HIPAA, GLBA, FFIEC and SOC 2. Zilla integrates automatically with SaaS applications, cloud platforms and on-premises systems to make access compliance easy.
